We have set some simple and effective principles as basic photo editing tips here. We hope you can work with all of these correctly to set up impressive editing in the future.

Photo Editing Software / Basic Photo Editor –

Its always good to start with some free editing software. Because, free stuff lets you

do more practice without cost anything, and you can spend somewhere else, if necessary. The following are the most regularly utilized free photo editing software.

Picasa –

It offers to adjust the shadows and highlights of a dull image and comes in completely free.

PhotoPlus –

Its offers using different tools an image such as layer effects, erase tools, clone, smudge, selection, and so on. So, you can cover at least basic free editing with this software.

GIMP –

If you are interested to learn advanced photoshop, then GIMP is for you. GIMP offers photoshop plug-ins and advanced versions like layer masks, smart selection tools, layer transparency, basic vector graphic support, etc.

After a free version, you

can now move for cost-effective photo editing software's. Such as:

- Adobe Lightroom
- Adobe photoshop elements
- Corel Paint Shop Pro
- Microsoft Digital Image Suite.
- Ulead PhotoImpact

Expensive photo editing software –

- Adobe Photoshop
- Macromedia Fireworks

It's good to know about different software according to the price tag. But what we suggest for the beginners to concentrate on photographic tips, tricks, styles, and rules to take out the best image. As per software concern, they can start with the free version.

Photo editing rules –

- Consider the Grid When taking the Shot according to the rule of thirds.
- Avoid zoom and use a high-quality tripod.
- Space should be balanced and neutral, with no biases
- Do the experiment always.
- Blacks should be black.
- Whites should be white.
- Take more photos than it's needed.
- Don't over-saturate images.
- Use crop to optimize.
- Flash natures should be more realistic and consistent.
- An image should be in level or straight.

- Checkout tilt-shift whenever take photos
- Fix and eliminate “red-eye” issues when the flash used.
- Work with the contrast, saturation, and brightness.
- Sharpen all images last and do it carefully
- Save images based on their intended use
- Always take a copy of the original photo and stay natural
- For easy identification, rename or save images based on the event.
- To do professional style, photography above rules should follow strictly.

Photo editing style –

We know photography is an art, but sometimes it needs some style modification if anyone considers it competitively. So, learning about photo editing style is highly required, particularly if you want to make your good photos great.

- Know about deep etch service in details.
- Avoid harsh or dramatic color edits
- Eliminate Distracting or Excessive Elements.
- Create Tools or use software for Consistency.
- Do actions such as Adjusting and correcting colors.
- Auto Colour / Auto Levels, light, and retouching.
